Subject: netstat in hardware node

In Virtuozzo, if you login to the hardware node and do a netstat -ptan, you'll see all connections to the server.

In OpenVZ I don't see any of the connections to the VE's. Is this normal? Can I change it? It's convenient being able to monitor all connections from the hardware node.

SL 6.1 with 2.6.32-042stab039.3.
