i believe you could get FC4 template meta data sources, compile, install it and by using vzpkgcache you should be able to create FC4 x86_64 template. I'm not sure though - don't have x86_64 host to test :-/

From changelog:

* Mon Oct 10 2005 Kir Kolyshkin <kir-at-openvz.org> 2.0-1

- added support for multiple architectures

So looks like it should work okay.
