aistis wrote on Tue, 11 July 2006 12:22I'm almost 100% sure they are doing it.

Sometimes I'm so stupid . It didn't occur to me that it is possible for Strato to make a server which does reply to ARP requests, but doesn't reply to ping requests.

I've booted to another Debian partition on the same machine which doesn't have any OpenVZ stuff on it. With a tcpdump I see the ARP reply and that the ping requests are going to this MAC address. But no answers of course. I hate it when they make networks this complex

Ok, now going through the scripts to see if I can exclude eth0 in the arpsend test that OpenVZ is using. So that I can rely on the arpsend test in the future...

Thanks for the help.
