Update: I've reinstalled the host with Centos 5.7 and the latest 2.6.18 stable vz kernel, now ipv6 works great within the containers

my sysctl.conf:

net.ipv6.conf.all.forwarding=1

net.ipv6.conf.default.forwarding=1

#MG: enable ipv6 forwarding for containers

net.ipv6.bindv6only=1

PS the latest 2.6.18 vz kernel has also the vswap feature.
