I'm confused--this seems half-done. I see that you're creating the gid caches dynamically, but there's still this static definition:

> struct cache_detail unix_gid_cache = {
> .owner = THIS_MODULE,
> .hash_size = GID_HASHMAX,
> - .hash_table = gid_table,
> .name = "auth.unix.gid",

> .cache_upcall = unix_gid_upcall,

And it looks like unix_gid_lookup is still using this static unix_gid_cache. Maybe I'm missing something....
