Subject: Hornet Queue (jboss) vs sever resource shortage

Hello,
 we have encountered a very strange behaviour of HornetQueue, running it inside vz results in:

 bash: fork: Cannot allocate memory
or
  xmalloc: cannot allocate 4008 bytes (2084864 bytes allocated)

(this is on host node, that has ~20G of free, unused RAM, inside containers the problem is not visible - hornet is limited to ~4G of ram, container is limited to ~16G of ram and 0 vSwap, rest is unlimited)

 UBC inside container shows no visible resource usage problem, I'd go as far as to call it frugal - 1600 filedescriptors, very low shm usage, physpages nowhere near limit, and yet, when daemon runs, HN is unable to even accept login from console.

how can I track down what is causing this?

regards, Eyck
