Subject: [PATCH 0/3] SUNRPC: three bugfixes for PipeFS event handling
Posted by Stanislav Kinsbursky on Fri, 20 Apr 2012 14:18:59 GMT
View Forum Message <> Reply to Message

These bugfixes were caught (or noticed) due to the following simple script:

```
 ========================================================== ==========

#!/bin/bash
service rpcbind stop
service rpcidmapd stop
killall -TERM rpc.statd
umount /var/lib/nfs/rpc_pipefs
rmmod nfs
service rpcbind start
service nfs start
mount -t rpc_pipefs sunrpc /var/lib/nfs/rpc_pipefs

 ========================================================== ==========
```

The following series consists of:

Stanislav Kinsbursky (3):
    SUNRPC: skip clients with program without PipeFS entries
    SUNRPC: traverse clients tree on PipeFS event
    SUNRPC: set per-net PipeFS superblock before notification
