Subject: IPsec inside a container

Hi,

I was hoping to setup ipsec+racoon+quagga inside an openvz container.

Just started to set it up and I'm encountering errors.
Before I start debugging them it would be nice if I knew it is actually possible.

I know openvpn and vpnc work inside a container, but I really need ipsec+racoon+quagga.

If it is not possible, is there any plan or roadmap to include this option?

Thank you in advance.
