Subject: HN with multiple NICs and two CT
Posted by ralcantara on Wed, 25 Jul 2012 11:07:25 GMT

Hi:

I have this setup:

 One HN with 4 NICs. One NIC is connected to the local network with a static IP address (eth0) and the other three (eth1, eth2 & eth3) are connected to a cable-modem using a switch. The IP addresses are obtained using DHCP from the former cable-modem.
 Two CTs (CT1 and CT2) that should have two of the public IP addresses that the HN owns (eth2 & eth3).

I can ping to all the IP addresses from Internet so routing is running fine. I've tried different setups using venet y veth without success. My question is, is it possible to assign eth2 to CT1 and eth3 to CT2?

Thanks in advance.
Rafa.
