Hello everyone

I had some trouble with my server, so I decided to completely reinstall everything. I have set it up exactly the way it was before (same kernel etc.) and am now trying to restore a vzdump with no luck.

System
Debian Squeeze 64-bit
2.6.32-5-openvz-amd64
VZ packages latest version from official squeeze repos

When trying to restore I get this error:

INFO: restore openvz backup '/home/backup/vz/ve-dump.241.1344460623.tar' using ID 241
you choose to force overwriting VPS config file, private and root directories.
INFO: extracting archive '/home/backup/vz/ve-dump.241.1344460623.tar'
tar: write error
INFO: Total bytes read: 857856000 (819MiB, 55MiB/s)
INFO: extracting configuration to '/etc/vz/conf/241.conf'
INFO: sh: cannot open /var/lib/vz/private/241/etc/vzdump/vps.conf: No such file
ERROR: restore openvz backup '/home/backup/vz/ve-dump.241.1344460623.tar' failed - command 'sed -e 's/VE_ROOT=.*/VE_ROOT=\"\/var\/lib\/vz\/root\/$VEID\"/' -e 's/VE_PRIVATE=.*/VE_PRIVATE=\"\/var\/lib\/vz\/private\/$VEID\"/' <'/var/lib/vz/private/241/etc/vzdump/vps.conf' >'/etc/vz/conf/241.conf'' failed with exit code 2

(that's with the --force param, just tried now) and without:

INFO: restore openvz backup '/home/backup/vz/ve-dump.241.1344460623.tar' using ID 241
INFO: extracting archive '/home/backup/vz/ve-dump.241.1344460623.tar'
tar: write error
INFO: Total bytes read: 857856000 (819MiB, 464MiB/s)
INFO: extracting configuration to '/etc/vz/conf/241.conf'
INFO: sh: cannot open /var/lib/vz/private/241/etc/vzdump/vps.conf: No such file
ERROR: restore openvz backup '/home/backup/vz/ve-dump.241.1344460623.tar' failed - command 'sed -e 's/VE_ROOT=.*/VE_ROOT=\"\/var\/lib\/vz\/root\/$VEID\"/' -e 's/VE_PRIVATE=.*/VE_PRIVATE=\"\/var\/lib\/vz\/private\/$VEID\"/' <'/var/lib/vz/private/241/etc/vzdump/vps.conf' >'/etc/vz/conf/241.conf'' failed with exit code 2

What's the file "NFO: sh: cannot open /var/lib/vz/private/241/etc/vzdump/vps.conf: No such file" for? Does it need to be created within the structure of the HW node or within the container dump?

Any help would be really appreciated

Regards
