Hi all,

We just released Proxmox VE 2.2, see:

http://forum.proxmox.com/threads/11570-Proxmox-VE-2-2-releas ed!

We got a new console view (with login capability). Especially for beginners it is not that easy to understand and manage containers but with the new console this is big step forward.

OpenVZ and KVM (or any other full virtualization) console looks now quite similar and well known.

Details, HowTo and Screenshots:
