Subject: How to stop the VE during service vz stop

Hello All,

in the past, as I remember, if we stop the vz service (service vz stop), it will automatically stop all VE containers accordingly.

Now, updated to the latest kernel, and vzctl, when we stop the vz, it will suspend all the VE(s), instead of stopping them.

May I know anyway to make stop all the VE(s) when the vz service stop?

I am afraid when we update the ovzkernel, it cannot resume the VE after reboot, and cause the mysql inside VE sudden poweroff , and cause an inconsistent state.

Please advise.

Thank you for your kind attention.
