Subject: OpenVZ-Container does not restart/reboot

Hello,

at first; sorry for my bad english!

my problem:
I use a node with openvz-kernel 042stab072.10 and all current utilities. It works fine. But the containers cannot restart/reboot inside. No matter what command "shutdown now -r" or "reboot". The result is always the same. The containers stopped with status "mounted". Only the command "vzctl start CTID" helps to start the containers. What is the problem? Please help me! Thanks.
