I'm looking for an easy way (but not even know if it's possible ...) to revert to the old/legacy OpenVZ storage from ploop.

I've several CT using ploop i want to convert them to the standard OpenVZ storage layout.

Thanks in advance for your help !

/Xavier
Hi.
1. vzctl mount 2222
2. cp from /vz/root/2222/ to /vz/private/2223/
3. start 2223
