Subject: Changing permissions on bind mount

I have a SMB bind mount to a openvz client:

#!/bin/bash
mount -o gid=107,uid=107 --bind /mnt/media /var/lib/vz/root/104/mnt/media

I am trying to set the owner of the bind mount to a user on the CLIENT. Not sure how to do that, since I get permission denied when I attempt to change it on the client itself. The ID of the user is 107 on the client, with made me try to mount it with that user, but really didn't think that would work.. at a loss at how to set the owner to a user on the client....
