Hello for all

When I made

```
# yum update -y && yum upgrade -y
```

Loaded plugins: fastestmirror

Loading mirror speeds from cached hostfile

You could try using --skip-broken to work around the problem

You could try running: rpm -Va --nofiles --nodigest

I have installed the last kernel " rhel6/042stab078.28 " from here [http :
//openvz.org/Download/kernel/rhel6/042stab078.28](http://openvz.org/Download/kernel/rhel6/042stab078.28)

Please, any idea how can you fix?

Thanks for all,
