Hello, i applied openvz templates:

ubuntu-12.04-x86_64.tar.gz
ubuntu-12.04-x86.tar.gz
ubuntu-13.04-x86_64.tar.gz

(downloaded from: download.openvz.org/template/precreated/)

to a VPS under OpenVZ, but i cant connect this new VPS via Putty (SSH)!

It tells me: Network error: Connection timed out

via HyperVM when i go to command line, i start ssh via service ssh start.

But it still dont works. Please why?

(Ubuntu 6.x template works and connects ok)

UPDATE1: after i started networking service on that VPS (service networking restart) i was able to SSH into VPS. After reboot, it fails to connect again, it appears ssh, networking is not started on reboot. Please what to do? I thought templates should be ready for SSH/network connections?
