dear all,

but first, sorry i can't speak english very well

i have trouble here. i can create a container (using debian 5.0 x86 template) from my server (centos 6.3). but when i want to create a container via OpenVZ Web Panel, template wasn't detected. i have put some templates in /vz/template/cache/

when i check in Centos with "vzlist -a" there's no template shown. but i can create a container with "vzctl create 101 --ostemplate debian-5.0-x86 --config basic"

any ideas?

thanks
