Subject: Having to re-arp

I don't think this is necessarily openvz specific, but it is only happening on our ovz boxes. We have run into an issue where a VE will suddenly be unreachable. doing an arpsend to re-announce it fixes it magically. I've automated the check and fix, but I'm curious as to why it happens. Other VEs on the same box are fine, even within the same IP range. It happens on both pub and private. Any thoughts?
