Subject: ksplice with debian wheezy ?

Hi folks,

is anyone here running OpenVZ kernel (e.g. 2.6.32-openvz-042stab081.8-amd64) on current debian wheezy and is using ksplice (packages.debian.org/en/wheezy/ksplice) for updating OpenVZ kernel to newer versions without reboot?

During the last time I got OpenVZ kernel updates frequently but don't want to reboot my host every few days. Therefor I thought about using ksplice but don't have any experiences with it so far.

But, what's about you?

Greetinx
