---

2.6.32-042stab088.4

vzctl version 4.7.2

The issue is this.

VE was converted from simfs to ploop.

I get

```
root@server1:/# df -h
```

Filesystem	Size	Used	Avail	Use%	Mounted on
/dev/simfs	9.9G	4.5G	5.4G	45%	/
tmpfs	2.0M	0	2.0M	0%	/lib/init/rw
tmpfs	1.0G	0	1.0G	0%	/dev/shm

But

```
/vz/private/505 # du -sh *
```

```
38G root.hdd
```

```
4.0K Snapshots.xml
```

There are no snapshots but VE root.hdd for some reason takes up 38 gig instead of 5-10.

What could be wrong and how to bring it down in size?

Thank you.
