Hello i read scripts on openvz.org/Ploop/Backup
Quote:
vzctl snapshot $CTID --id $ID --skip-suspend --skip-config

Perform a backup using your favorite backup tool
(cp is just an example)
cp $VE_PRIVATE/root.hdd/* $BACKUPPATH/

Delete (merge) the snapshot
vzctl snapshot-delete $CTID --id $ID

Why merge run after cp? Also, i can copy only root.hdd, without snapshot if snapshot already merged and deleted?
