Hi All,
Maybe someone have some experience with non vz kernel.

I would like to know if the bellow list possible.

1. vzctl enter
2. set maximum memory
3. set number of cpu
4. vzlist (Or other friendly way to know what is running)
5. ploop support with maximum disk size.
6. bridge support

host is Ubuntu 12.04

If all is working I will fight with the installation currently i'm unable to enter the vz. but it's running.

Many Thanks
