Subject: Debian - Openvz is not reading from /vz partition

Hello.  I have openvz running on Debian.  I believe i followed all the steps, minus creating a /vz partition right off the bat.  I did add this after i installed the modified vz kernel.

My issue is when i go to vzctl create ctid --ostemplate --osname (of course im filling those in).  I get an error saying:

Cached OS template /var/lib/vz/template/cache/debian7.tar[.gz|.bz2|.xz] not found

I tried linking this to my /vz directory but did not work.  I have:

root@Debian:~# ls /vz/template/cache
debian-7.0-x86_64.tar.gz  vz

I am a bit clueless.

I also find myself having to add directories to my /vz partition.  I don't think this is how its intended to be but again i apologize for being new.
