Hi guys, the server is for colocation, i already installed centos

i already set /etc/sysconfig/network-scripts/ifcfg-eth0 with primary ip
and
/etc/sysconfig/network

i got these 5 IPs
1.1.1.1 - 1.1.1.5

now i want to install Openvz,
is there i need to do with the additional IPs, before installing Openvz?
like creating ifcfg-eth1, ifcfg-eth2, ifcfg-eth3, ifcfg-eth4 ?

this is my first time want to install Openvz, usually i install cpanel & the whm is set the additional ip automatically
