Hi everyone,

I have a little bit strange situation. Three identical physical servers with fresh system & vz installations connected to same switch without any limits on ports and:

- host1: can use full speed of download from lan and world
- host2: can use full speed of download from lan and world
- host3: can use full speed of download from lan and world

- CT on host1: can use full speed of download from lan and world
- CT on host2: can use full speed of download from lan AND ONLY 2MB/s from world (lan upload also on full speed)
- CT on host3: can use full speed of download from lan AND ONLY 2MB/s from world (lan upload also on full speed)

Quote:

1% [> ..... .] 11,074,013 2.04M/s eta 5m 25s

Any ideas why these transfers are not going over 2MB/s?

My systems:

uname -a
Linux host12.local 2.6.32-042stab112.15 #1 SMP Tue Oct 20 17:22:56 MSK 2015 x86_64 x86_64 x86_64 GNU/Linux

vzctl --version
vzctl version 4.9.4
