I'm trying to create a VM not in a virtual machine (physical server)

cat /etc/virtuozzo-release
OpenVZ release 7.0.7 (288)

prlctl create vm1 --distribution centos7 --vmtype vm
Creating the virtual machine...
Generate the VM configuration for centos7.
Failed to register the VM: PRL_ERR_VM_UNABLE_GET_GUEST_CPU
Failed to create the virtual machine.
