Subject: prl_disk_tool compact on started containers

Hi,

Documentation says prl_disk_tool compact cannot not be used on started containers, but I tried it and it works, I made some tests and it doesn't seems to cause problems.

Is it a new feature or I could experience problems? If it could case problems, it should fails if it runs on a started container.

I plan to do compacts periodically to recover free space. Compacting everyday I recover 20gb of free space.

Kind regards
