zovet wrote on Fri, 13 July 2018 21:20Does the OpenVZ kernel allow for auditd to run inside a container?

I can't seem to get it to start, and I'm wondering if it's because it's OpenVZ.

I found some references that seem to indicate there is an issue, but all of those are back in 2009 and 2011. I wasn't sure if those ever got resolved or if people just stopped trying to get auditd running in an OpenVZ container.

Hello zovet,

https://help.virtuozzo.com/customer/en/portal/articles/2510729-auditd-fails-to-start-inside-containers
It's not possible to use audit daemon inside containers.

Tom
