In case of you met the same message in dmesg as Allan, the patch should fix your problem.

I've tried to use the module you've linked but I'm finding some trouble.

# md5sum kpatch.ko
8ec9997bc4a65c1a0b0a65d4950187a6  kpatch.ko

# uname -r
3.10.0-1127.8.2.vz7.151.14

kpatch load kpatch.ko
loading core module: /usr/lib/modules/3.10.0-1127.8.2.vz7.151.14/extra/kpatch/kpatch.ko
insmod: ERROR: could not insert module
/usr/lib/modules/3.10.0-1127.8.2.vz7.151.14/extra/kpatch/kpatch.ko: Unknown symbol in module
kpatch: failed to load core module

Could you please double check whether that's the correct module for this kernel version?
