Subject: Openvz 8?

Greetings, I've been using openvz (and virtuozzo) since version 5. It's still my go to solution, and believe me, I've tried them all.

I'm beginning to wonder if OVZ-7 is the end of the road. Is there some plan for OVZ-8? I've heard no official word or even unofficial chatter about OVZ-8 lately, and I'm starting to cast about to make sure there are alternatives, in case this is a dead end.

Can you confirm or deny that there will be a Centos-8 based release of OVZ?

A clear word would do much to give us some much needed peace of mind.
