It was lot of messages about usleep in OVZ8.

Now it is even more errors in startup scripts in OVZ9

I can only think about using > /dev/null 2>&1 as a remedy.

```
[root@node01 ~]# vzctl start 1301
Starting Container ...
Mount image: /vz/private/1301/root.hdd
Container is mounted
Setting permissions for image=/vz/private/1301/root.hdd
tune monotonic -786 285110074
tune boottime -786 285018640
Os release: 4.18.0
Setting permissions for image=/vz/private/1301/root.hdd
Cannot detect partition for /dev/dm-9700
Adding ip address(es): 10.1.3.1 fc00:0:1:3::1

Container start in progress...

Also after system bootup not all container are in the running state. About half of them are stopped after startup. Each time random.
