As the subject states, we just noticed a new kernel was released and updated/rebooted a few of our non-production hosts. They all have the same issue when attempting to start a container. You can't start a container and get this error:

Failed to start the CT: PRL_ERR_VZCTL_OPERATION_FAILED (Details: vcmmd: failed to register Container: Failed to get VCMMD D-Bus name
vcmmd: failed to unregister Container: Failed to get VCMMD D-Bus name
vcmmd: failed to unregister Container: Failed to get VCMMD D-Bus name
Failed to start the Container
)

I noticed that vcmmd.service is stuck "activating", and looking at the vcmmd.log it's failing with this:

2024-01-25 09:30:26 INFO vcmmd: Started
2024-01-25 09:30:26 INFO vcmmd.config: Loading config from file '/etc/vz/vcmmd.conf'

2024-01-25 09:30:26 CRITICAL vcmmd: AttributeError: 'NoOpPolicy' object has no attribute 'active_vm'

Is anyone else running into this? I have the same issue on all 4 hosts that I updated yesterday.

Thanks!,
