I've applied your patch (had to redo it for the older Kernel I seem to be using) and it applied and compiled fine.

I've seemingly been able to access the PPP device, so even that's looking a it better.

On Monday I'll get one of the guys to run the tests and will let you know the results one I've got them, but so far, so good.

Thank you, you help was greatly appreciated.

Regards,
Eugéne
