So as I understand your VPSs are not available from outside. Could it be the case that you have forgot to enable ip forwarding?

Make sure that `cat /proc/sys/net/ipv4/ip_forward` shows 1. If not, you can do `echo 1 > /proc/sys/net/ipv4/ip_forward` to fix the problem immediately.

For proper fix, see Quick Install article, or User's Guide (look for 'Sysctl configuration').
