there are different ways to get more space for your vz installation.

1.) you can create a directory anywhere in your system on a partition with enough space and make a symbolic link to the /vz directory

```
mkdir -p /home/openvz
```

```
ln -s /home/openvz /vz
```

2.) you can create an own partition for your vz directory (for instance as lvm volume) and mount it on /vz

mario.

===EDIT===

... hmm, seems that i'm too slow *g*
