Hi All,
Can anybody tell me which is the oldest and newest linux kernel version that OpenVZ supports for LIVE MIGRATION .
I ahve been trying few of them but there seems to be some problem with them .
Is thr any stable OpenVZ linux kernel version relased so far ?? Is that live migration stuff done completed and can be tested ??
Please dont take in the wrong way .. i just could not find stable release supporting this LM featue .. so before trying anything i wud like to make sure that feature is complete ...

Regards.
