Quote:I'd think so, but I've yet to be able to get 'vzpkgcache' to build a package cache. Any thoughts?

Can you send us the exact command you are running, the kernel version, and the error message?

Whenever reporting any technical problem, its ideal to include a method for others to duplicate the problem on their end. If this is not possible, such that you have some specific scenario, you will need to provide as much background information as possible.
