Hello

Yes works now, but with the updated iptable.

Yes it is strange to me too, since the same iptable version and the latest ovz kernel, on another machine (Mdk community) do not show the error.

Another question, OOT:

Since i have changed to the ovz kernel and all other stuff with iptable in my ipcop box, one of my script showing the connections stop working. the reason is that /proc/net/ip_contrack is not readable by other, and i am unable to make it readable by other or to change any permission on it (as root)

is there a way to tell to make this file readable by other (ugo+r)?

Thanks

Jo
