Hi,

pre:

To prevent a compile error, copy the vzlist.h out of the source tree of vzctl (in the directory ./include/) and copy to /usr/include/linux/vzlist.h

Modify the /usr/include/linux/vzlist.h:

```
from
char *ve_status[]= {
    "running",
    "stopped",
    "mounted"
};
```

to:

```
/*
 * char *ve_status[]= {
 *     "running",
 *     "stopped",
 *     "mounted"
 * };
 */
```

and build the tools:

```
# rpm -iv --rebuild vzprocps-2.0.11-6.12.swsoft.src.rpm
```
