Subject: Suse 9.3 Image - Creating

Hi everybody,
some days ago I installed Openvz on a Fedora Core 4 box.
Also, i installed Suse 9.3 and copied the whole image into the private-server-area on the server.
Yet, the server works, BUT:
ALL services (including network and ssh - who needs em don´t BOOT automatic. While watching Yast, all init-scripts should boot while starting the server. What´s wrong :-< ?
After doing a /etc/init.d/network start and a /etc/init.d/ssh start, server is reachable from outside well .
Also, the server hangs off if you do a vzctl stop vpsnumber.
Seems to be a big problem with the start/stop scripts. Any ideas?
If we could fix this problem up, i could test it and then would give anyone the sources so that everybody could install 9.3 Suse on its own.

Thanks,
Regards,
Ronny
