Is standard command line syntax supported --verbose[=]<id> ?

I don't like introducing the VERBOSE parameter. Why do you need so complex setup

LOG_LEVEL, VERBOSE, --verbose?

If you need to limit console verbosity use --verbose <id> command line option, by default

console_level = log_level.

I don't see the reason to change default LOG_LEVEL, level > 0 usually used for debug, all error messages are not controlled by --verbose, LOG_LEVEL and will be displayed any way.

So if we only introduce --verbose <id> command line option is it not enough for you?
