Hai,

Yes it seem so, but when i'm pinging the router using its name, it will answer fast & correctly, this make me confuse, because old kernel works normal.

O, ya, i'm running it in HN and no other VE has been created.

the cat /proc/sys/net/ipv4/ip_forward

return 1 in value.

ifconfig, return only eth0 and lo0.

Other service like telnet, FTP and SSH works normal (even to the router).

Any special setting should i do ?

Thx for your reply,

MBG
