Yes, at this moment I have only one kernel installed. Before I got your initial reply, I had already done a fresh Debian install and started to try to do a kernel rebuild myself.

The first time I did not compile the kernel myself. I followed the instructions on "Installation on Debian" [wiki.openvz.org](http://wiki.openvz.org/wiki.openvz.org/Installation_on_Debian) (see [http://wiki.openvz.org/Installation\\_on\\_Debian](http://wiki.openvz.org/wiki.openvz.org/Installation_on_Debian)). I assumed that an 'aptitude install' is always safe. The configuration file that comes along with that kernel has CONFIG\_BLK\_DEV\_PIIIX=y

Is that of any help?
