Subject: Warning about resource shortage

Hello,

is it possible to get warning when *any* resource shortage happens? I've seen several times:

Dec 20 16:04:39 chlivek kernel: Fatal resource shortage: kmemsize, UB 187033.
Dec 20 16:04:39 chlivek kernel: Fatal resource shortage: kmemsize, UB 187033.

But never for something else than kmemsize. I would like to see (have recorded) warning about any resource shortage counter change. This could help me decide whatever system need tuning resource or not (depending on time and state of other systems).

Is chance to switch on such feature or have I write myself some script which will parse /proc/user_beancounters?

Best regards
