Hello Kir,

When I do "lsmod | grep vz" vznetdev seems not loaded.

Then I do "modprobe vznetdev" like you said.

That seems to change things but still no vps can be started.

The error msg I get now is this:

```
-----
:~# vzctl start 101
Starting VE ...
VE is mounted
Adding IP address(es): 192.168.166.5
RTNETLINK answers: No such device
vps-net_add ERROR: Unable to add route /sbin/ip route add 192.168.166.5 dev venet0
VE start failed
Stopping VE ...
VE was stopped
VE is unmounted
-----
```

Do you have another hint?
