Subject: Coming from virtuozzo

Hi,

Currently we use virtuozzo on a few system and I had a couple questions about the openvz implimentation.

1.) How well does it handle namebased VEs. On virtuozzo you can have multiple VEs share the same IP simular to how apache does namebased vhosts

2.) What significant differences are their in backing up and migrating VE from 1 hardware node to another.

3.) Is there any GUI interfaces for this project at all yet?

Thanks

Miles
