Sorry not sure I understand you...

"As I can see in your commndline "eth0" persists"

do you mean

```
$ vzctl set 101 --veth_add veth101.0, a_made_up_MAC_address, eth0,  
a_made_up_MAC_address+1 --save
```

the eth0 in the line above? Isn't this the virtual Ethernet device which I'm creating?

Or do you mean the ".0" part of veth101.0? I just copied the format from the wiki and assumed the same format.

BHT
