Hi all

I posted this on proxmox maillist, but think this is the best place to do it, because is openvz related.

Please, how can i pre-set capabilities so when the virtual machine is created will start with things i need, for example, whenever i create a vm from proxmox web inteface, i need to go to cli machine and write: vzctl set VETID --save --capability sys_time:on and vzctl exec VETID ln -s /usr/share/zoneinfo/Europe/Rome /etc/localtime, before i start the new machine

There is any config file where i can preset things like this, being standard for mostly all my vm?

Thanks in advance for any help

I don't know where Proxmox gets its default settings from and that's what you need to change. I'm afraid that's a completely Proxmox related question.

If we would be talking strictly about openvz, it would be a matter of making a new custom template or adjusting an existing one in /etc/vz/conf.
