hi all

someone knows How to exclude debian squezze original kernel from aptitude upgrades?
i have installed openvz on debian squezze. now i need to update it but ,aptitude upgrade shows:

apt-get upgrade
Reading package lists... Done
Building dependency tree
Reading state information... Done
The following packages will be upgraded:
  aptitude base-files ca-certificates firmware-linux-free grub-common grub-pc libgssapi-krb5-2 libgssrpc4 libk5crypto3 libkadm5clnt-mit7 libkadm5srv-mit7
  libkdb5-4 libkrb5-3 libkrb5support0 libssl0.9.8 linux-base linux-image-2.6.32-5-amd64 linux-image-2.6.32-5-openvz-amd64 openssh-client openssh-server
  openssl tzdata usbutils
23 upgraded, 0 newly installed, 0 to remove and 0 not upgraded.
Need to get 69.8 MB of archives.
After this operation, 7,168 kB disk space will be freed.

is it possible to exclude linux-image-2.6.32-5-amd64 from apt/sources ?

on centos and lenny i have excluded base kernels.

thanks all.

why not to remove the unused linux kernel image packages ?

Bye,
 Thorsten

Hi!

If my systems new kernel crashes, I need second kernel to boot up and try to correct problems.

thanks

that is not an openvz-related question, but one that u could have solved yourself by "man aptitude" or using google.

try:
aptitude hold <package>
